

AESC Engineers – Setting the Standard for Quality in Regulatory Compliance

Pasadena CA, January 2015 - In the fourth quarter of 2014, AESc's client, a California Investor Owned Utility (IOU) tracked issues identified during California Energy Commission regulatory reviews of custom incentive applications.

The data below was assembled by the IOU program management team to measure the effectiveness of the third party reviewer pool in a fixed price environment.

The chart illustrates how AESc's approach impacts quality. AESc had 25% to 30% fewer issues than our peers and 60% less than the outlier. These results were used to define the benchmarks which now comprise the IOU's quality control goals for 2015.
